Manitoba Beef and Forage Initiatives (MBFI) would like to share our interest in growing engagement between MBFI and local 4-H Beef Clubs. MBFI is a centre of agricultural innovation engaging in science-based research to benefit valuable ecosystems, improve producer profitability and build social awareness around the beef and forage industry. We see an opportunity to be of service to the wonderful work being done by 4-H with the next generation of cattle producers.

We have enjoyed and have had strong positive feedback for events hosted with 4-H to date and we would love to have local Beef Clubs for a tour of our farm(s) to see our ongoing research and demonstration projects related to beef and forage production. MBFI also has the capacity for guided hands on learning in our handling facilities and pasture systems.

MBFI is located just outside of Brandon, MB. We have two farm sites, Brookdale Farm and Johnson Farm, with our on-farm cow/calf herd that is either on pasture or extended grazing 365 days of the year. Our Brookdale farm site at the corner of Highway 10 and PR 353 (Brookdale Road) and our Johnson farm location on the North Hill, on Lori Road just east of 1st street.

Our newly opened Learning Centre at the Brookdale farm is also available for presentations and classroom activities. If a club is unable to come visit us, one of our staff would be honoured to be a guest speaker at club meetings to talk about MBFI and ongoing projects related to their interests.
