Cloud in a Jar

A cloud is formed when water vapor condenses into water droplets that attach to particles (of dust, pollen, smoke, etc.) in the air. When billions of these water droplets join, they form a cloud. Now you can make a cloud in a jar using the experiment found in the link below.

Make it Rain

For this experiment you will need a clear cup, water, shaving cream and food colouring. Below is the link for the experiment. Hope you enjoy this fun activity.

Steeped in Soil

4-H Canada has the Steeped in Soil activities available for download on their website. Please see link below.

Picture of the Week

We are looking for pictures of Science Experiments you have done at home. Send them along to learns@4h.mb.ca and we will share them on our Social Media platforms. Your picture may be featured on 4-H Canada's Social Media platforms as well.
